ASSOCIATED WITH INTRACELLULAR MEMBRANES. PROBABLY PRESENT ON VESICLES OPERATIONAL BETWEEN THE ER AND THE GOLGI COMPLEX. ER AND THE GOLGI COMPLEX. DEPOSED IS HIGHLY REPETITIVE, COMPOSED DOMAIN: THE ROBLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, COMPOSED OF AN HEPTAPEPTIDE REPEAT PATTERN CHARACTERISTIC OF ALPHA-HELICAL COILED COILS. MAY FORM FILAMENTOUS STRUCTURES IN THE CELL. SIMILARITY: BELONGS TO THE VDP/USO1/YBL047C FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Y., Symington L.S.;

SUBUNIT: Consists of three subunits; uvrA, uvrB and SUBCELLULAR LOCATION: Cytoplasmic (By similarity). SIMILARITY: BELONGS TO THE UVRB FAMILY.
SIMILARITY: CONTAINS 1 UVR DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     catalyzes the excision reaction of UV-damaged Involectide segments producing oligomers having the modified base($). UvrB stimulates the ATPase activity of uvrA in the presence of UV-irradiated double-stranded DNA. It also enhances the ability of uvrA to bind to uvrA to bind the uvrA to bind to uvrA to uvrA to bind to uvrA to uvrA to bind to uvrA to uvrA to bind to uvrA to uvrA to uvrA to uvrA to uvrA to uvrA to bind to uvrA to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: The ABC excision nuclease is a DNA

ISOFORM 4/YOTIAO IS ASSOCIATED WITH THE N-METHYL-D-ASPARTATE RECEPTOR AND IS SPECIFICALLY FOUND IN THE NEUROMUSCULAR JUNCTION (NMJ) AS WELL AS IN NEURONAL SYNAPSES EXPLAINING THAT ITS ROLE MAY BE TO ORGANIZE POSTSYNAPTIC SPECIATIONS.
SUBUNIT: INTERACTS WITH THE REGULATORY REGION OF PROTEIN KINASE N (PKN), PROTEIN PHOSPHATASE 2A (PP2A), PROTEIN PHOSPHATASE 1 (PP1) AND THE IMMATURE NON-PHOSPHORYLATED FORM OF PKC EPS LON.
SUBCELLULAR LOCATION: CENTROSOMAL IN MANY CELL TYPES AND CYTOPLASHIC IN PARIETAL CELLS.
CYTOPLASHIC IN PARIETAL CELLS.
ALTERNATIVE PRODUCTS: 6 ISOFORMS; 1 (SHOWN HERE), 2 3/CG-NAP, 4/YOTIAO, 5 AND 6/AKAP350; ARE PRODUCED BY ALHERNATIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SPLICING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CAUTION: REF.6 SEQUENCE DIFFERS FROM THAT SHOWN DUFFRAMESHIFTS IN POSITIONS 3782 AND 3811.
CAUTION: REF.9 SEQUENCE DIFFERS FROM THAT SHOWN DUFFRAMESHIFTS IN POSITIONS 29, 1653, 1699 AND 1735.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TISSUE SPECIFICITY: WIDELY EXPRESSED. IS-FORM 4/YOT-AO IS HIGHLY EXPRESSED IN SKELETAL MUSCLE AND IN PANCREAS.

DOMAIN: RII BINDING SITE, PREDICTED TO FORM AN AMPHIPATHIC HELIX, COULD PARTICIPATE IN PROTEIN-PROTEIN INTERACTIONS WITH A COMPLEMENTARY SURFACE ON THE R-SUBUNIT DIMER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PHOSPHATASES ON CENTROSOME AND GOLG! "Characterization of the kinetochore binding domain of CENP-E reveals interactions with the kinetochore proteins CENP-F and hBUBRI.";
J. Cell Biol. 143:49-63(1998).
-:- FUNCTION: PROBABLY REQUIRED FOR KINETOCHORE FUNCTION, INVOLVED IN CHROMOSOME SEGREGATION DURING MITOSIS. INTERACTS WITH RETINOBLASTOMA PROTEIN (RB), CENP-E AND BUBRI.
-:- SUBUNIT: HOMO- OR HETERODIMER.
-:- SUBCELLULAR LOCATION: NUCLEAR MATRIX (BUT NOT IN THE NUCLEOLUS),
REORGANIZATION TO THE KINETOCHORE/CENTROMERE (CORONAL SURFACE OF THE OUTER PLATE) AND THE SPINDLE DURING MITOSIS.
-:- DEVELOPMENTAL STAGE: GRADUALLY ACCUMULATES DURING THE CELL CYCLE.
                                                                                                                                                                                                                                                                                           DOMAIN
